求解问题7

考察下述 Coulomb 摩擦阻尼系统

$$\ddot{u}(t) + \mu N \operatorname{sgn} \dot{u}(t) + \omega_0^2 u(t) = 0$$

其中摩擦系数 μ 为小参数,用 KBM 法求解该系统自由振动的一次近似。

7 用多尺度法求题 5 中系统自由振动的一次近似解。

解

变形原方程为

$$\ddot{u}(t) + \omega_0^2 u = -\varepsilon N \operatorname{sgn} \dot{u}(t) \quad \varepsilon = \mu \tag{1}$$

为求解一次近似解, 需要用两个时间尺度 T_0, T_1

代入方程

$$\begin{cases} D_0^2 u_0 + \omega_0^2 u_0 = 0 \\ D_0^2 u_1 + \omega_0^2 u_0 = -2 D_0 D_1 u_0 + p(u_0, D_0 u_0) \end{cases} \tag{2}$$

得

$$\begin{cases} D_0^2 u_0 + \omega_0^2 u_0 = 0 \\ D_0^2 u_1 + \omega_0^2 u_0 = -2D_0 D_1 u_0 - N \operatorname{sgn}(D_0 u_0) \end{cases} \tag{3}$$

解

$$D_0^2 u_0 + \omega_0^2 u_0 = 0 \tag{4}$$

为

$$u_0=a(T_1)\cos(\omega_0T_0+\varphi(T_1)) \eqno(5)$$

应用 Euler 公式写出复数形式

$$u_0 = A(T_1)e^{j\omega_0 T_0} + \text{cc } \text{ cc } 代表共轭项$$
 (6)

其中, $A = \frac{ae^{j\varphi}}{2}$

代入

$$D_0^2 u_1 + \omega_0^2 u_0 = -2 D_0 D_1 u_0 - N \operatorname{sgn}(D_0 u_0) \tag{7} \label{eq:7}$$

计算

$$\begin{split} D_0 D_1 u_0 &= D_1 D_0 u_0 \\ &= D_1 D_0 \big(A(T_1) e^{j\omega_0 T_0} + \text{cc} \big) \\ &= D_1 D_0 A(T_1) e^{j\omega_0 T_0} + D_1 D_0 \text{ cc} \\ &= j\omega_0 e^{j\omega_0 T_0} D_1 A(T_1) + \text{cc} \text{ cc 会随着变动, 保证实数} \end{split} \tag{8}$$

$$\begin{split} D_0 u_0 &== D_0(a(T_1)\cos(\omega_0 T_0 + \varphi(T_1))) \\ &= \omega_0 a \cos \psi \end{split} \tag{9}$$

所以

$$D_0^2 u_1 + \omega_0^2 u_0 = -2j\omega_0 e^{j\omega_0 T_0} D_1 A(T_1) - N \operatorname{sgn}(\omega_0 a \cos \psi) \eqno(10)$$

为消除永年项,要求不能含有 $e^{\pm j\omega_0T_0}$

则有

$$\begin{cases}
D_{1}a = -\frac{1}{2\pi\omega_{0}} \int_{0}^{2\pi} p(a\cos\psi, -\omega_{0}a\sin\psi) \sin\psi \,\mathrm{d}\psi \\
= \frac{N}{2\pi\omega_{0}} \int_{0}^{2\pi} \mathrm{sgn}(-\omega_{0}a\sin\psi) \sin\psi \,\mathrm{d}\psi \\
= -\frac{2N}{\omega_{0}\pi} \mathrm{sgn}(a\omega_{0}) \\
D_{1}\varphi = -\frac{1}{2\pi\omega_{0}a} \int_{0}^{2\pi} p(a\cos\psi, -\omega_{0}a\sin\psi) \cos\psi \,\mathrm{d}\psi \\
= \frac{N}{2\pi\omega_{0}a} \int_{0}^{2\pi} \mathrm{sgn}(-\omega_{0}a\sin\psi) \cos\psi \,\mathrm{d}\psi \\
= 0
\end{cases} (11)$$

所以

$$\begin{cases} a = -\frac{2N}{\omega_0 \pi} \operatorname{sgn}(a\omega_0) T_1 + a_0 \\ \varphi = \varphi_0 \end{cases}$$
 (12)

所以

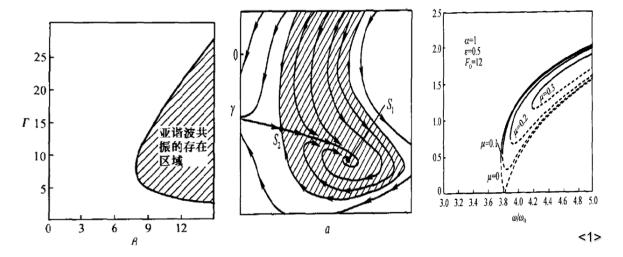

$$\begin{split} u &= \left(-\frac{2N}{\omega_0 \pi} \operatorname{sgn}(a\omega_0) T_1 + a_0 \right) \cos(\omega_0 T_0 + \varphi_0) \\ &= \left(-\frac{2N}{\omega_0 \pi} \operatorname{sgn}(a\omega_0) \varepsilon t + a_0 \right) \cos(\omega_0 t + \varphi_0) \end{split} \tag{13}$$

题 2

另作业: 对 $\ddot{x} + 2\varepsilon\mu\dot{x} + \omega_0^2 x + \varepsilon\alpha x^3 = F_0\cos\omega t$

 $\varepsilon = 0.5, \alpha = 1, F_0 = 1.2$ 其他参数按照不同的图自定

还原亚谐波共振情形的下面三个图,需要提交程序,推导、程序和还原图贴在PPT上

解

采用多尺度的一次近似,需要用两个时间尺度 T_0, T_1 ,有

$$\begin{cases} D_0^2 x_0 + \omega_0^2 x_0 = F_0 \cos \omega T_0 \\ D_0^2 x_1 + \omega_0^2 x_1 = -2 D_0 D_1 x_0 - 2 \mu D_0 x_0 - \alpha x_0^3 \end{cases} \tag{14}$$

解

$$D_0^2 x_0 + \omega_0^2 x_0 = F_0 \cos \omega T_0 \tag{15}$$

得

$$x_0 = A(T_1)e^{j\omega_0 T_0} + \Lambda e^{j\omega T_0} + \text{cc} \quad \Lambda = \frac{F_0}{2(\omega_0^2 - \omega^2)} \quad A = \frac{1}{2}ae^{j\varphi}$$
 (16)

代入

$$\begin{split} D_0^2 x_1 + \omega_0^2 x_1 &= - \left[2i\omega_0 (D_1 A + \mu A) + 6\alpha A \Lambda^2 + 3\alpha A^2 \overline{A} \right] e^{j\omega_0 T_0} \\ &- \alpha \left(A^3 e^{3j\omega_0 T_0} + \Lambda^3 e^{3j\omega T_0} + 3A^2 \Lambda e^{j(2\omega_0 + \omega)T_0} \right. \\ &+ 3\overline{A}^2 \Lambda e^{j(\omega - 2\omega_0)T_0} + 3A\Lambda^2 e^{3j(\omega_0 + 2\omega)T_0} + 3A\Lambda^2 e^{j(\omega_0 - 2\omega)T_0} \right) \\ &- \Lambda \left(-2j\mu\omega + 3\alpha\Lambda^2 + 6\alpha A\overline{A} \right) e^{j\omega T_0} \end{split} \tag{17}$$

亚谐波共振则有

$$\omega = 3\omega_0 + \varepsilon\sigma \tag{18}$$

代入

$$3\overline{A}^{2}\Lambda e^{j(\omega-2\omega_{0})T_{0}} = 3\overline{A}^{2}\Lambda e^{j(\omega_{0}+\varepsilon\sigma)T_{0}}$$

$$= 3\alpha\overline{A}^{2}\Lambda e^{j\sigma T_{0}}e^{j\omega_{0}T_{0}}$$
(19)

$$2j\omega_0(D_1A+\mu A)+6\alpha A\Lambda^2+3\alpha A^2\overline{A}+3\alpha\overline{A}^2\Lambda e^{j\sigma T_0}=0 \eqno(20)$$

可得

$$\begin{cases} D_1 a = - \Big[\mu + \frac{3\alpha\Lambda}{4\omega_0} a \sin(\sigma T_0 - 3\varphi) \Big] a \\ D_1 \varphi = \frac{3a}{\omega_0} \Big[\Lambda^2 + \frac{1}{8} a^2 + \frac{\Lambda}{4} a \cos(\sigma T_0 - 3\varphi) \Big] \end{cases} \tag{21}$$

$$\begin{cases} D_1 a = -\left(\mu + \frac{3\alpha\Lambda}{4\omega_0} a \sin\gamma\right) a \\ D_1 \gamma = \sigma - \frac{9a}{\omega_0} \left[\Lambda^2 + \frac{1}{8}a^2 + \frac{\Lambda}{4}a \cos\gamma\right] \end{cases}$$
 (22)

令 $D_1a=0,D_1\gamma=0$, 则有

$$\begin{cases} \mu &= -\frac{3\alpha\Lambda}{4\omega_0} a_s \sin\gamma_s \\ \sigma - \frac{9\alpha}{\omega_0} \left(\Lambda^2 + \frac{a_s^2}{8}\right) = \frac{9\alpha\Lambda}{4\omega_0} a_s \cos\gamma_s \end{cases} \tag{23}$$

消去 γ_s ,则有

$$9\mu^2 + \left(\sigma - \frac{9\alpha\Lambda^2}{\omega_0} - \frac{9\alpha}{8\omega_0}a_s^2\right)^2 = \frac{81\alpha^2\Lambda^2}{16\omega_0^2}a_s^2 \eqno(24)$$

得

$$a_s^4 + 2pa_s^2 + q = 0 (25)$$

其中,

$$\begin{cases} p = \frac{8\omega_0 \sigma}{9\alpha} - 6\Lambda^2 \\ q = \left(\frac{8\omega_0}{9\alpha}\right)^2 \left[9\mu^2 + \left(\sigma - \frac{9\alpha\Lambda^2}{\omega_0}\right)^2\right] \end{cases}$$
 (26)

解得

$$a_s^2 = p \pm \sqrt{p^2 - q} \tag{27}$$

若有实数解,则要求

$$\begin{cases} p > 0 \\ p^2 > q \end{cases} \Leftrightarrow \begin{cases} \Lambda^2 < \frac{4\omega_0 \sigma}{27\alpha} \\ \frac{\alpha \Lambda^2}{\omega_0} \left(\sigma - \frac{63\alpha \Lambda^2}{8\omega_0}\right) - 2\mu^2 \ge 0 \end{cases}$$
 (28)

引入参数

$$\begin{cases} \beta = \frac{\sigma}{\mu} \\ \Gamma = \frac{63\alpha\Lambda^2}{4\omega_0\mu} \end{cases}$$
 (29)

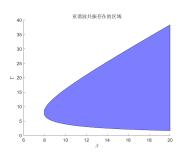

不等式变为

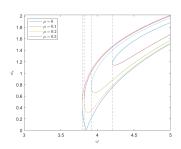

$$\begin{cases} \Gamma & < \frac{7}{3}\beta \\ \Gamma^2 - 2\beta T + 63 \le 0 \end{cases}$$
 (30)

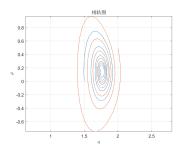

则给定 σ 振幅 a_s 有实数解的条件为

$$\beta - (\beta^2 - 63)^{\frac{1}{2}} \le \Gamma \le \beta + (\beta^2 - 63)^{\frac{1}{2}} < \frac{7}{3}\beta$$
 (31)

作图

```
代码
% 定义 beta 的范围
beta = linspace(0, 20, 400); % 包括负值和正值的区间
% 计算对应的 Gamma 值
Gamma_lower = beta - sqrt(beta.^2 - 63);
Gamma_upper = beta + sqrt(beta.^2 - 63);
% 为了防止复数结果,我们只在 beta^2 - 63 >= 0 的情况下计算 Gamma
valid_indices = beta.^2 >= 63;
beta_valid = beta(valid_indices);
Gamma_lower_valid = Gamma_lower(valid_indices);
Gamma_upper_valid = Gamma_upper(valid_indices);
% 绘制 Gamma 的下界和上界
